Martin Mehner, Chief Engineer.
Samuel Jackson Inc.

Re Samuel Jackson Conditioning Hoppers.

Dear Martin,

I am very pleased to report that the Conditioning Hopper installed during the off-season are performing perfectly.

Having now ginned over 9000 hales since the installation we have noticed that with the seed cotton being ginned at 7% the following improvements have resulted.

- (i) Reduction of dust etc being omitted from the gin stand.
- (ii) Reduction of 80% in lint cleaner torque arm throw-outs & chokes.
- (iii) Increase of approx 1.5 bales per hour in overall production.
- (iv) Less load on gin stand.
- (v) Has enabled the Steam Roller to add moisture back into the lint slightly more efficiently, with the flow on effect of more even moisture and bale weight.
- (vi) Slight reduction in pintrash in lint.
- (vii) More consistent lint quality.

Martin, we are also pleased to have been able to utilize the Cimco Humidaire unit for the Conditioning Hoppers which was replaced when the Steam Roller was installed the previous year.

Thank you for once again providing Brighann Ginning with another Samuel Jackson Product that works to perfection.

Kind Regards,

A handwritten signature in cursive script that reads "Ian Rawlins".
