Bill Grills,
Tandau Cotton.

Re Samuel Jackson Steam Roller Lint Conditioner.

Dear Bill,

Brighann Ginning made the decision to install the Sam Jackson Steam Roller due to the unsatisfactory performance of the existing system supplied by Lummus although it was only two seasons old.

We are very pleased indeed with the performance of the Steam roller. From the moment it was commissioned by Martin Mehner, it has performed well above our expectations. Below is a list of the benefits we have gained;-

- (i) Easily achieves our target bale moisture content of 8% (this was unachievable before.)
- (ii) Bale moisture content is more even.
- (iii) No Battery condenser chokes etc.
- (iv) Travels down lint slide quicker in a nice compressed bat.
- (v) No rotation wads in press boxes.
- (vi) A reduction in press bottom ram hydraulic pressure from 5000-> 5300psi to 3500-> 3800psi.
- (vii) Less Gas consumption.
- (viii) Increase in turnout.
- (ix) No loss of fibre strength due to low bale moisture.

From the above it is quite easy to see the financial and quality benefits to the Gin and Grower. I have no hesitation in recommending the Steam Roller system to any future customer.

Kind Regards,

Jan Rawlins

General Manager.
